Target Role: Full Stack Intern | Job ID: FSI282505

PROFESSIONAL SUMMARY

Full-stack developer intern candidate with hands-on experience building responsive web applications, API integrations, database-backed workflows, and real-time dashboards. Strong foundation in Java, JavaScript/TypeScript, React/Next.js, relational databases, Git, and cloud fundamentals, with a focus on clean, maintainable product engineering.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, C, C++, Python basics

Frontend: React.js, Next.js, HTML, CSS, Tailwind CSS, responsive UI components

Backend & APIs: Node.js fundamentals, REST APIs, JSON, webhooks, server-side logic, Inngest jobs

Databases: MySQL, PostgreSQL, Neon DB, MongoDB, relational modeling, indexed fields

Tools & Cloud: Git/GitHub, VS Code, AWS Certified Cloud Practitioner, Azure AI Fundamentals

EXPERIENCE

AI & Data Analytics Virtual Intern | *AICTE - Shell India - Edunet Foundation | Remote | Jun 2025 - Jul 2025*

- Processed and cleaned 10K+ records, strengthening data handling, debugging, and structured problem-solving skills.
- Implemented classification/regression models and improved performance through feature engineering and iterative testing.
- Created 8+ dashboards/plots using Python libraries to communicate results and validate analytical workflows.
- Worked on AI use cases involving sustainability, data preparation, model evaluation, and insight presentation.

PROJECTS

AI Job Guide | *Next.js, Neon DB, Inngest, Gemini API, Tailwind CSS | 2026*

- Architected a full-stack AI interview preparation platform for job seekers using Next.js, server workflows, and database storage.
- Integrated Gemini API to generate interview scenarios, resumes, and cover letters from user-provided context.
- Automated background workflows with Inngest and improved product usability through responsive Tailwind UI components.
- Debugged frontend, API, and database interactions to keep user flows reliable across generated content features.

Chocolate Fund - Payment Tracking Platform | *React/Next.js, relational database, Razorpay, Pusher | 2026*

- Engineered a multi-admin payment tracking platform with real-time fine collection, webhook validation, and audit logs.
- Designed a normalized relational data model with 5 entities and 10+ indexed fields for efficient payment lookup and reporting.
- Integrated Razorpay webhook verification to validate UPI payments, prevent duplicate UTRs, and preserve transaction integrity.
- Implemented Pusher WebSocket broadcasting for live updates across 3+ admin dashboards without polling overhead.

Garbage Classification | *Python, TensorFlow/Keras, OpenCV | 2025*

- Built an end-to-end image processing and deep learning pipeline using 1,000+ labeled images.
- Developed preprocessing, training, validation, and result interpretation steps for waste category classification.

EDUCATION

KL University, Hyderabad, India | Bachelor of Technology in Electronics and Communication Engineering - IOT | CGPA: 9.26 | Aug 2023 - May 2027

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- NPTEL Programming in Java
- Microsoft Azure AI Fundamentals (AI-900)
